

Order of Operations Example - Multiply, Divide with Parentheses

1

Which operation should be done first in this equation?

$$5 \div (3 \times 4) = ?$$

A

B

$$5 \div 3 \quad 3 \times 4$$

2

Which operation should be done first in this equation?

$$(3 \div 7) \times 2 = ?$$

A

B

$$3 \div 7 \quad 7 \times 2$$

3

Which operation should be done first in this equation?

$$(9 \div 6) \times 5 = ?$$

A

B

$$9 \div 6 \quad 6 \times 5$$

4

Which operation should be done first in this equation?

$$(9 \div 5) \times 7 = ?$$

A

B

$$9 \div 5 \quad 5 \times 7$$

5

Which operation should be done first in this equation?

$$9 \div (4 \times 5) = ?$$

A

B

$$4 \times 5 \quad 9 \div 4$$

6

Which operation should be done first in this equation?

$$5 \div (4 \times 7) = ?$$

A

B

$$5 \div 4 \quad 4 \times 7$$

7

Which operation should be done first in this equation?

$$(8 \div 2) \times 6 = ?$$

A

B

$$2 \times 6 \quad 8 \div 2$$

8

Which operation should be done first in this equation?

$$3 \div (7 \times 4) = ?$$

A

B

$$7 \times 4 \quad 3 \div 7$$
