Statistics - Mean/Median/Mode/Range - Definition to Approach

1

The most commonly occurring number in a set of numbers

How would you calculate this measurement?

A	Count how many of each number there are and choose the one that is most common
B	Put the numbers in order and choose the middle one
C	Add up all the numbers and divide by how many numbers there are
D	Subtract the smallest number from the biggest number

2

The average of a set of numbers

How would you calculate this measurement?

A	Put the numbers in order and choose the middle one
B	Subtract the smallest number from the biggest number
C	Add up all the numbers and divide by how many numbers there are
D	Count how many of each number there are and choose the one that is most common

3

The distance between the highest and lowest of a set of numbers

How would you calculate this measurement?

A	Put the numbers in order and choose the middle one
B	Count how many of each number there are and choose the one that is most common
C	Subtract the smallest number from the biggest number
D	Add up all the numbers and divide by how many numbers there are

4

The middle number of a set of numbers when ranked in order

How would you calculate this measurement?

A	Subtract the smallest number from the biggest number
B	Count how many of each number there are and choose the one that is most common
C	Add up all the numbers and divide by how many numbers there are
D	Put the numbers in order and choose the middle one
