

## Triangle Classification - Angles - Name to Description

**1** Choose the right description of the triangle based on its name

right triangle

- |                                       |                                 |
|---------------------------------------|---------------------------------|
| A One angle is more than $90^\circ$   | B One angle equal to $90^\circ$ |
| C All angles are less than $90^\circ$ |                                 |

**2** Choose the right description of the triangle based on its name

obtuse triangle

- |                                       |                                     |
|---------------------------------------|-------------------------------------|
| A One angle equal to $90^\circ$       | B One angle is more than $90^\circ$ |
| C All angles are less than $90^\circ$ |                                     |

**3** Choose the right description of the triangle based on its name

acute triangle

- |                                       |                                 |
|---------------------------------------|---------------------------------|
| A All angles are less than $90^\circ$ | B One angle equal to $90^\circ$ |
| C One angle is more than $90^\circ$   |                                 |
